Sriram M

Full Stack Engineer · Java / Spring Boot + React

Bangalore, India · +91 7760058009
sriramm015@gmail.com LinkedIn GitHub Portfolio

Full stack engineer with 2+ years of experience building production systems end to end, from REST APIs and database design to React frontends and AWS operations. Technical Lead at ProDiligix, rebuilding a logistics operations portal on Spring Boot, React and AWS used by enterprise clients including HCCB, Rapido and Candescent. Strong in Java, Spring Boot, MySQL and API design, with hands-on ownership of security, releases and carrier integrations.

EXPERIENCE

Technical Lead, Full Stack, ProDiligix Technologies, Bangalore — Jul 2026 to present

- Leading the ground-up rebuild of the company's operations portal, replacing a legacy Vue/Rails stack with Spring Boot REST APIs, MySQL and React + Tailwind on AWS EC2 and Nginx; used daily by enterprise clients HCCB, Rapido and Candescent.
- Integrated Delhivery and Bluedart (via NimbusPost) APIs for booking, labels, live tracking and cancellation; built one-click booking for HCCB with purchase-order billing and delivery documents emailed automatically.
- Built wallet and purchase-order billing with automatic deductions, cancellation refunds, RTO charges and minimum-balance rules; reconciled month-end billing between the wallet ledger and shipment records to the paisa.
- Hardened security: moved the JWT signing secret into server-only configuration, added per-account and per-IP login rate limiting resistant to spoofed headers, restricted public database access and fixed a privilege bug in user management; role-based access across five user roles.
- Set up automated daily EBS snapshot backups (AWS DLM), a health-check endpoint and uptime monitoring; automated live carrier tracking for HCCB's 320+ parcel Diwali dispatch into daily client delivery reports.
- Built browser-to-S3 presigned uploads (up to 500 MB) and automated MIS and wallet alert emails via AWS SES; own staging and production releases, database migrations and live data fixes.

Software Engineer, Backend, Encora Innovation Labs (now Coforge) — Jun 2024 to Jun 2026

- Built and maintained production REST APIs in Java, Spring Boot and Micronaut for Keap/Thryv, including Twilio toll-free verification endpoints.
- Refactored a core service to deploy independently behind a feature flag, enabling rollout without downtime; maintained CI/CD on CircleCI.
- Built and maintained a Python ETL pipeline for large-scale MLS real-estate data in MongoDB, with validation, monitoring and ELK-based debugging.

Backend Intern, Encora Innovation Labs — Oct 2023 to Jan 2024

- Built e-commerce price scrapers with BeautifulSoup and integrated them into a Django price comparison app.

PROJECTS

Executive Function Benchmark for LLMs, Python, Hugging Face, Pandas — Kaggle Silver Medal

Designed a 104-task benchmark measuring instruction-following in frontier LLMs (Gemini 2.5, Claude Sonnet, Qwen 3, Gemma 3) with a new Strict Instruction Compliance metric; awarded a Kaggle Silver Medal (71 upvotes).

SKILLS

Languages	Java, Python, JavaScript, SQL
Backend	Spring Boot, Micronaut, REST APIs, JWT auth and role-based access, Django
Frontend	React, Tailwind CSS
Databases	MySQL, PostgreSQL, MongoDB
Cloud & DevOps	AWS (EC2, S3, SES, EBS snapshots, Security Groups), Nginx, Linux, Git, CircleCI, Swagger
Integrations	Delhivery, NimbusPost / Bluedart, Twilio

EDUCATION & CERTIFICATION

B.Tech, Computer Science Engineering, Dayananda Sagar University — 2020 to 2024

Databricks Certified Data Engineer Associate
